Experiment 5:

Aim

To implement the Porter stemming algorithm to reduce words to their stem forms using Python.

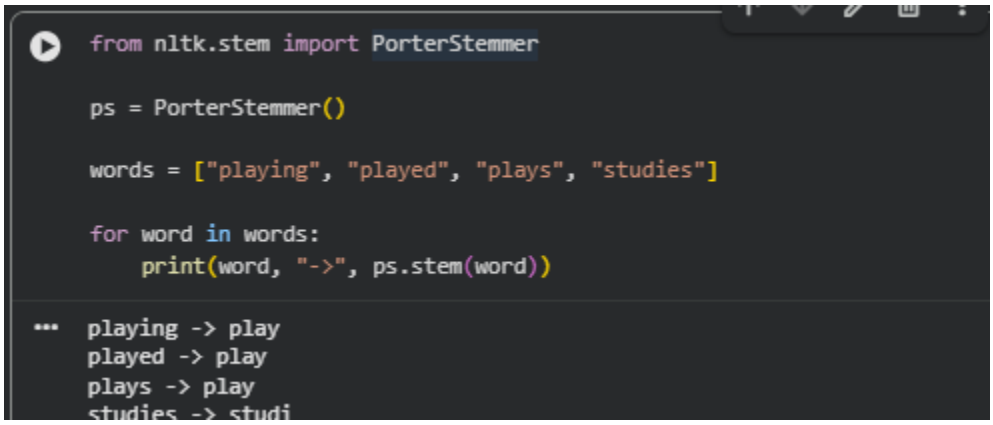

Algorithm

1. Import `PorterStemmer` from NLTK.
2. Create a stemmer object.
3. Store a list of words.
4. Apply the stemming algorithm to each word.
5. Display each word and its stem.

Python Program

```
from nltk.stem import PorterStemmer
ps = PorterStemmer()
words = ["playing", "played", "plays", "studies"]
for word in words:
print(word, "->", ps.stem(word))
```

Sample Output

Result

Thus, the Porter stemming algorithm was successfully implemented to reduce words to their stem forms.
