# SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

## Department of Artificial Intelligence and Data Science

## CO1-ASSESSMENT TOOL 1 – APPLICATION BASED QUESTIONS

| | | | |
|---|---|---|---|
| **Course Code:** | DSA03 | **Course Title:** | Natural Language Processing |
| **CO Assessed:** | CO1 – Imitation (L1) | **Assessment:** | Assessment Tool 1 – Application Based Questions |
| **Weightage:** | 40% of CIA | | |
| **CO1 Statement:** | Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3) | | |
| **Student Name:** | | **Reg. No.:** | |
| **Section / Batch:** | | **Date:** | |

**Code of Conduct**

*I (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.*

Signature of the Student:

**Instructions**

- Develop a modular and efficient Python program that satisfies all the functional requirements specified in the problem statement.
- Demonstrate the correctness of the implementation using suitable test cases and justify the output obtained.
- Follow good programming practices, including meaningful variable names, proper code indentation, comments, and error handling wherever applicable.
- Duration: 30 minutes.

| Section / Topic | Focus | Q Nos |
|---|---|---|
| **Information Extraction** | Regex-Based Information Extraction | 1 |
| **Pattern Matching** | Regex Pattern Matching | 2 |
| **Regular Expression Patterns** | Regex-Based Input Validation | 3 |

## Rubrics for Calculation

| Criteria | Weightage | Level 4 – Exemplary | Level 3 – Proficient | Level 2 – Developing | Level 1 – Beginning |
|---|---|---|---|---|---|
| **Understanding of Problem Context** | 20 | Clearly understands the problem and accurately identifies all requirements | Good understanding with minor gaps | Basic understanding; some requirements unclear | Poor understanding or misinterpretation of the problem |
| **Application of Concepts** | 30 | Accurately applies appropriate concepts to solve complex problems | Applies relevant concepts correctly with minor errors | Applies basic concepts with limited accuracy | Fails to apply appropriate concepts |
| **Problem-Solving Approach** | 20 | Logical, well-structured, and efficient approach | Mostly logical approach with minor gaps | Basic approach with some inconsistencies | Illogical or unclear approach |
| **Accuracy of Solution** | 20 | Completely correct solution with proper justification | Mostly correct with minor errors | Partially correct solution | Incorrect or incomplete solution |
| **Clarity** | 10 | Clear, well-organized, and properly explained solution | Understandable with minor clarity issues | Limited clarity and explanation | Poorly presented and difficult to understand |

| Q. No. / Criteria | Understanding of Problem Context | Application of Concepts | Problem-Solving Approach | Accuracy of Solution | Clarity | Sub. Total | Total % |
|---|---|---|---|---|---|---|---|
| 1 | | | | | | | |
| 2 | | | | | | | |
| 3 | | | | | | | |

| Faculty In-charge | Course Coordinator | Program Director |
|---|---|---|
| | | |

| Date: _____ | Date: _____ | Date: _____ |

## Annexure A – Application Based Questions

### Section 1: Regular Expressions – Resume Information Extraction

1. A multinational recruitment company receives thousands of resumes every day in text format. The HR department requires an automated system to extract candidate information for shortlisting.

**Design and implement a Python-based resume information extraction system using Regular Expressions that performs the following tasks:**

Extract the candidate's name. Identify
email addresses.
Extract mobile numbers.
Detect technical skills (Python, Java, SQL, Machine Learning, NLP). Extract
years of experience.
Generate a structured summary of the candidate's profile.
Display candidates who satisfy the minimum eligibility criteria (minimum 2 years of experience and Python skill).

## CODE:

```
import re

resumes = [
    """Name: Arun Kumar
    Email: arun@gmail.com
    Mobile: 9876543210
    Skills: Python, Java, SQL
    Experience: 3 years""",

    """Name: Priya Sharma
    Email: priya@gmail.com
    Mobile: 9123456780
    Skills: SQL, NLP
    Experience: 1 year""",

    """Name: Rahul Raj
    Email: rahul@gmail.com
    Mobile: 9988776655
    Skills: Python, Machine Learning
    Experience: 2 years"""
]

for resume in resumes:
    name = re.search(r"Name:\s*(.+)", resume)
    email = re.search(r"[\w.-]+@[\w.-]+\.\w+", resume)
    mobile = re.search(r"\b[6-9]\d{9}\b", resume)
    exp = re.search(r"Experience:\s*(\d+)\s*years?", resume, re.I)

    skills = re.findall(
        r"Python|Java|SQL|Machine Learning|NLP",
        resume, re.I
    )

    years = int(exp.group(1)) if exp else 0
```

```
python_skill = bool(re.search(r"\bPython\b", resume, re.I))

print("\n--- Candidate Profile ---")
print("Name:", name.group(1).strip() if name else "Not found")
print("Email:", email.group() if email else "Not found")
print("Mobile:", mobile.group() if mobile else "Not found")
print("Skills:", ", ".join(skills) if skills else "None")
print("Experience:", years, "years")

if years >= 2 and python_skill:
    print("Status: Eligible")
else:
    print("Status: Not Eligible")
```

**OUTPUT:**

```
PS C:\Users\nancy> & C:/Users/nancy/AppData/Local/Python/pythoncore-3.14-64/python.exe c:/Users/nancy/npl_1.py

--- Candidate Profile ---

## Section 2: Regular Expressions – Product Search System

2. An e-commerce company plans to enhance its product search engine to improve customer experience through flexible keyword matching.

**Design and implement a Python-based product search system using Regular Expressions that performs the following tasks:**

Search products using an exact keyword.
Perform prefix-based searches.
Perform suffix-based searches.
Search using partial keywords.
Perform case-insensitive searches.
Display all matching product names.
Generate a report showing the total number of matching products for each search.

## CODE:

```
import re

products = [
    "Python Book",
    "Python Laptop",
    "Wireless Mouse",
    "Gaming Laptop",
    "Python USB Drive",
    "Laptop Stand"
]

def search(keyword, search_type):
    if search_type == "exact":
        pattern = r"^" + re.escape(keyword) + r"$"
    elif search_type == "prefix":
        pattern = r"^" + re.escape(keyword)
    elif search_type == "suffix":
        pattern = re.escape(keyword) + r"$"
    elif search_type == "partial":
        pattern = re.escape(keyword)
    else:
        print("Invalid search type")
        return

    matches = [
        p for p in products
        if re.search(pattern, p, re.I)
    ]

    print("\nSearch Type:", search_type)
    print("Keyword:", keyword)
    print("Matching Products:")

    for p in matches:
        print(p)

    print("Total Matches:", len(matches))
```

search("Python Laptop", "exact")
search("Python", "prefix")
search("Laptop", "suffix")
search("Laptop", "partial")
search("python", "partial")

**OUTPUT:**

```
KeyboardInterrupt
PS C:\Users\nancy> & C:/Users/nancy/AppData/Local/Python/pythoncore-3.14-64/python.exe c:/Users/nancy/npl_1.py

  Search Type: exact
  Keyword: Python Laptop
  Matching Products:
  Python Laptop
  Total Matches: 1

  Search Type: prefix
  Keyword: Python
  Matching Products:
  Python Book
  Python Laptop
  Python USB Drive
  Total Matches: 3

  Search Type: suffix
  Keyword: Laptop
  Matching Products:
  Python Laptop
  Gaming Laptop
  Total Matches: 2

  Search Type: partial
  Keyword: Laptop
  Matching Products:
  Python Laptop
  Gaming Laptop
  Laptop Stand
  Total Matches: 3

  Search Type: partial

```

You have Docker installed on
install the recommended ext

## Section 3: Regular Expressions – University Registration System

A university is developing an automated online registration portal to verify student information before course enrollment.

**Design and implement a Python-based validation system using Regular Expressions that performs the following tasks:**

Validate the student register number.
Validate the institutional email address.
Validate the course code.
Validate the semester information. Validate
the student's mobile number.
Display appropriate validation messages for each field.
Generate a final registration status report indicating whether the registration is successful.

## CODE:

```
import re

reg = input("Enter Register Number: ")
email = input("Enter Institutional Email: ")
course = input("Enter Course Code: ")
semester = input("Enter Semester: ")
mobile = input("Enter Mobile Number: ")

v1 = bool(re.fullmatch(r"\d{2}[A-Z]{3}\d{3}", reg))
v2 = bool(re.fullmatch(r"[\w.-]+@university\.edu", email, re.I))
v3 = bool(re.fullmatch(r"[A-Z]{2,4}\d{3}", course))
v4 = semester.isdigit() and 1 <= int(semester) <= 8
v5 = bool(re.fullmatch(r"[6-9]\d{9}", mobile))

print("\n--- Validation Report ---")
print("Register Number:", "Valid" if v1 else "Invalid")
print("Institutional Email:", "Valid" if v2 else "Invalid")
print("Course Code:", "Valid" if v3 else "Invalid")
print("Semester:", "Valid" if v4 else "Invalid")
print("Mobile Number:", "Valid" if v5 else "Invalid")

if all([v1, v2, v3, v4, v5]):
    print("\nRegistration Successful")
else:
    print("\nRegistration Failed")
    print("Please correct the invalid fields.")
```

## OUTPUT:

```
